# 1.1 ELECTRICITY

## TECHNICAL SPECIFICATIONS

- The voltage and kilowatt supplied is 110V/2KW in single phase and 208V/4KW in three phase, (with a maximum range of 5%), both with a frequency of 60 Hz.
- We recommend the use of voltage stabilizers and/or voltage regulators to reinforce the protection of computers and electronic equipment.
- From 3 kilowatts single-phase and 4 kilowatts three-phase a plastic power strip is supplied, the exhibitor is in charge of distributing the power and bringing it to your equipment.
- The extension socket does not include electricity.
- The single-phase installation does not allow for more than 3kw additional power.

## RECOMMENDATIONS

- The electrical service is disabled when the pavilion is closed. If you require a permanent 24-hour service to supply refrigeration machines, please inform the pavilion supervisor.
- Validate the feasibility of the services before contracting them.
- The installation of single-phase and three-phase sockets must be carried out prior to the layout and/or construction of floors or structures.
- Remember not to overload the electrical socket by exceeding the kilowatt capacity, check the wattage of the equipment you wish to use on your booth.
